Public Notice to Residents Town of Orange Park Sanitary Sewer Project Plainfield Ave. – Stiles Ave. to Ash St.

The Town of Orange Park has contracted Insituform Technologies LLC to rehabilitate the aging sanitary sewer trunk lines that run under Plainfield Ave. from Stiles Ave. to Ash St.

Insituform Technologies specializes in a process known as Cured-In-Place-Pipe Rehabilitation. This is a process by which a new pipe is installed inside of the old pipe utilizing existing manholes as access points. The biggest advantage to this process is that it does not require any digging and is far less intrusive to affected residents.

This process will take approximately two weeks to complete. The installation of the liners will occur at night from 7:00 PM to 5:00 AM. Construction is scheduled to begin the night of Monday April 17th. Residents located between Stiles Ave. and Shaw St. will be affected the nights of Monday April 17th thru Thursday April 20th. Residents located from San Robar Dr. to Ash St. will be affected the nights of Sunday April 23rd thru Thursday April 27th.

While our construction process is far less intrusive than the traditional method of digging and replacing pipe, there are still some minor inconveniences that will occur. The largest inconvenience will be the above ground pipes that we will be required to utilize to bypass the sewer flows during our work. It is very important that vehicles do not run over these pipes and at times the pipes will be crossing resident's driveways. Onsite personnel from Insituform will work with individual residents affected by these pipes to make sure everyone has access to be able to park their vehicles and leave in the morning for work or school. The other minor inconvenience will be changing traffic patterns. Due to the fact that the sewer runs under the roadway and the manholes are in the streets, temporary road closures to thru traffic and flagging will be required. The majority of the work will be done during night time hours so this should be a minimal inconvenience for most motorists.

We encourage you to visit the internet website below to view an animation of our process to better understand what we will be doing. Again representatives will be in the neighborhood to be sure and discuss any intrusions on a daily basis.
